

REMOTE E-STOP BUTTON

PRODUCT DESCRIPTION:

The Raynok Remote Emergency Stop Button allows users to place the triggering of the Emergency Stop action at the hands of technicians where they need to be. Expanding the system to include remote buttons ensures that in the event that an Emergency Stop is needed a button is setup close to where an observer is located. Operation of these buttons will not re-enable the system. The operator at the master station or console remains in control of reset, limiting the chances for error. Activated buttons, and their location, are reported back to the Operator.

PRODUCT SPECIFICATIONS:

| | |
