RAYNOK SERVER

PRODUCT DESCRIPTION:

The Raynok Server is your central system management device. From this one location the System Administrator can manage all input devices (operator consoles), location restrictions, machine parameters, file storage and user accounts.

Operating on the RAYNOK-SERVER software the server can be setup to take on the responsibility for broadcasting position information to a variety of receiving targets, such as media servers. It also acts as the overseer for added safety devices that are responsible for management of special awareness between objects in motion.
